Consult

Ultrasound

PABT done and fluids started

Time frame from induction to kittens out and in nurses hands ASAP – have everything prepared to reduce wasted time.

Sx procedure (see Sx notes for guidelines)

Sedate, induct, maintain

Midline incision; exteriorise uterus

Remove kits – remove from sac, clamp, hand to nurse for revival. Nurser rub vigorously, tie umbilical and remove clamp. Dopram inj .1ml into umbilical vessel. Kittens placed on warming pad when revived to wait for Mum.

Remove sac and placenta.

Give numbers of kits and any abnormalities to nurse to record

If desexing, continue as per normal.

Insert a/b tablets into uterus x 4 amoxycyclav 50mg

Suture closed, continuous, inverting x 2 layers.

Paint suture line with amacin and replace into abdomen

Suture muscle layer, subcutaneous, skin.

Inj – benicillan, meloxicam, syntocin.

Prefer no E- collar. Place in recovery, preferably on owners towel. Kittens placed close to Mum.

Post Sx care and recovery.
